

SAVAERS DATA REPORT

13 July 2022

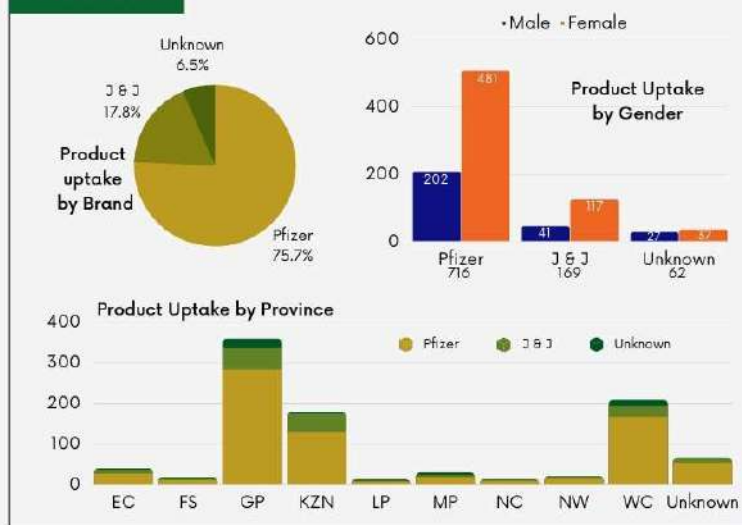

INTRO

SA VAERS is an independent alternative vaccine adverse events reporting system, by the people, for the people.

The focus of SA VAERS is to give survivors and victims a voice, enhance data transparency, and strengthen accountability for negative effects, injury or death following the C19 injection.

SA VAERS is Managed by Transformative Health Justice.

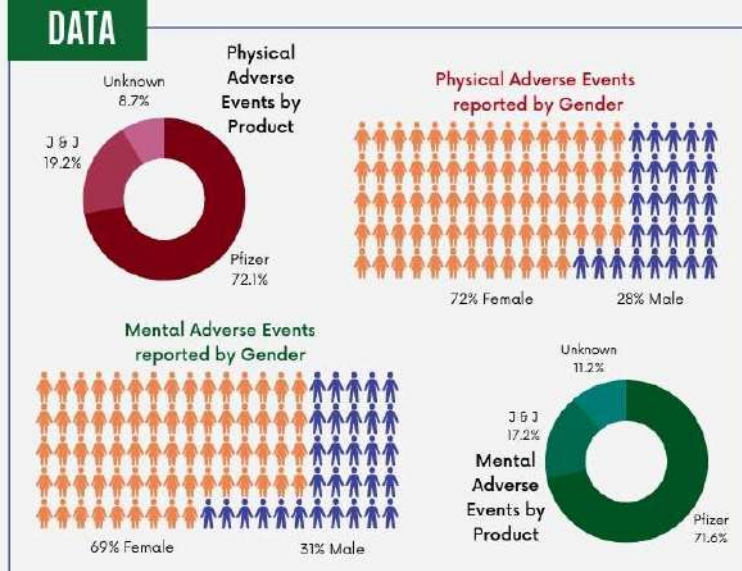

PRODUCT

EVENTS

According to the National Institute for Communicable Diseases, an adverse event following immunisation (AEFI) is ANY negative health event that happens after a person receives a vaccine. All health events after vaccination are important to investigate. Therefore, whilst some mild and short-lasting symptoms are predictable, moderately severe, severe and long-term side effects are not acceptable, and should be fully investigated. All adverse events should be reported, including those that have improved clinically or resolved spontaneously.

DATA

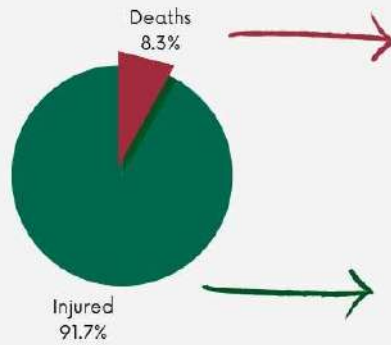

SAVAERS DATA REPORT

13 July 2022

DEATHS

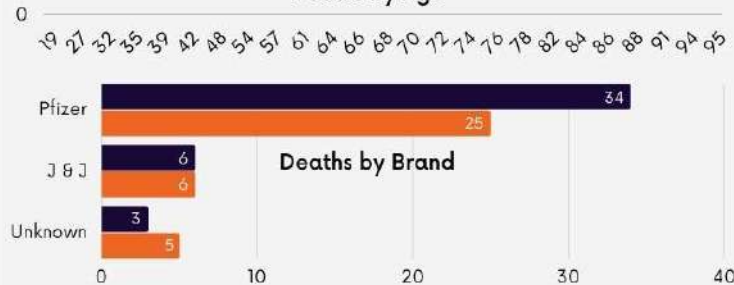

Total Adverse Events Reported - 947
Deaths Reported - 79

■ Male ■ Female

Deaths by Age

Deaths by Brand
